DETAILED ACTION

This is in response to amendment filed on 12/29/04 in which claims 1-2 are pending. The applicant's amendments have been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: an inverse phase rotation means (7) for inversely rotating a phase of the I and Q symbol stream data output from said demodulation means by a phase rotation angle (OR(3)) detected by said reception signal phase rotation angle detection means, thereby performing absolute phasing, wherein the carrier reproduction means of said reproduction means has phase error tables (13, 14-1, 15-1) for respective ones of the plurality of PSK modulation methods, the tables storing carrier phase error data for various demodulated I and Q symbol stream data pairs, and while said demodulation means demodulates a reception signal corresponding to a specific one of the PSK modulation methods, phase error data (A*(8)) corresponding to the demodulated I and Q symbol stream data is read from the phase error table corresponding to the specific modulation method to correct the phase of the carriers as recited in all independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fulton U.S. Patent No 5,604,768 teaches a frequency synchronized bidirectional radio system.

Gotoh U.S. patent No 5,65,971 teaches a phase demodulator.

Takahara et al U.S. patent No 5,493,710 teaches a communication system.
